No Freeze Self-Emptying Water Hose*

All our water lines use polyurethane NSF approved for drinking water. Products are rated at 100-150 psi.

Our lines and fittings use stronger, more durable plastics that perform well at extremely low temperatures and are UV resistant.

All lines come with a single set of Cam Lever couplings. Available in standard lengths of 25', 50', 75' and 100'. Lengths over 100' are custom orders.

- *Firehose-style* No Freeze Self-Emptying Water Hose (light but strong) 3/4" I.D. inner hose / 1-1/8" O.D. with blue or high-visibility yellow exterior hose to a maximum of 100' with garden hose fittings from \$5.00/ft. OR
- **Polylastic No Freeze Self-Emptying Water Pipe** (polyethylene modified for flexibility at low temp.) 3/4" I.D. inner hose / 1-1/8" O.D. blue exterior pipe with garden hose fittings from \$4.50/ft.
- **Polylastic No Freeze Self-Emptying Water Pipe** (polyethylene modified for flexibility at low temp.) 1-1/4" I.D. inner hose / 2" O.D. blue exterior pipe with 1-1/4" NPT end fittings from \$10.00/ft.

*10-year warranty limited to materials and workmanship under normal use. Does not extend to abuse or damage by purchaser.

Related Equipment

Recommended Components for use with 3/4" lines

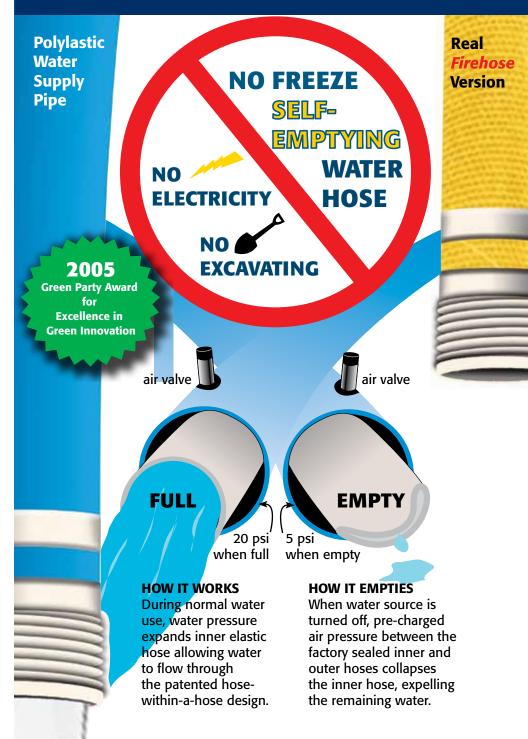

A solenoid valve with 110V transformer and choice of water trough float switch or timer or toggle switch to control on/off flow from water source to delivery end of line (eg. building to water trough or building to building)

24V brass solenoid valve with 110V transformer – for use with 3/4" lines – heavy-duty, industrial quality valve	\$	85.00
Water trough float switch	\$	40.00
Manual toggle switch or on-off timer	\$	20.00
Air Expansion Kit – for custom lines over 100 feet	\$	95.00
Cam Lever Quick-Connect coupling – 2-part set Available and interchangeable garden hose thread or pipe thre	\$ ad	20.00

IT'S A BREAKTHROUGH IN HOSE AND WATER LINE TECHNOLOGY!

No Freeze • No Electricity • No Excavating

Tired of carrying buckets? Freeze-up causing damaged garden hoses? Fed up with the cost of heated lines? Need a reliable supply of water for farm or commercial use?

Now there's **No Freeze**. A unique product that replaces your standard hose or waterline to supply water year-round without the need for excavation, insulation or electricity. **No Freeze** is a hose and water line system that empties itself after every use to eliminate freezing and water line damage. It even empties uphill! And doesn't need to be protected from the elements or cold weather. Just run **No Freeze** anywhere you need water—even across the snow!

How does *No Freeze* Self-Emptying Water Hose work?

No Freeze is a hose within a hose consisting of an outer protective hose and a flat eslastic inner hose. Between these two layers is a permanently charged air chamber—like a tire. Turn the water on and household water pressure forces open the inner hose delivering the water you need. Turn it off and the air pressure collapses the inner hose back to its original flat profile, ejecting the water. No water resting in the hose means there's no water to freeze. Should any ice crystals remain, they are dislodged by the elastic nature of the inner hose the next time you use it. Tested under the most demanding conditions for over 15 years, **No Freeze** is flexible, durable and reliable—even at -40°.

Choose from – *Firehose-style No Freeze Self-Emptying Water Hose* – lightweight, compact, flexible, moveable and durable for farms, gardens, car care, and outdoor ice-rinks.

or – **Polylastic** *No Freeze* **Self-Emptying Water Pipe** – the flexible pipe version for farms, cottages and other semi-permanent installations.

Compare these benefits with any other water system!

- Prevents water line freezing to -40°
- Non-toxic for organic gardens—inner hose approved drinking water safe
- Saves the cost of electrical heating
- Eliminates the need for excavation
- Transportable-reposition the line as needed
- Empties water line regardless of terrain --uphill and downhill
- Polylastic pipe can be placed below grade and covered, or used with corrogated pipe for quick and easy repositioning
- Permanently pressurized system—like a car tire is easily monitored and simple to re-charge, if necessary, with a bicycle pump
- Supplied with a garden hose thread Cam-Lever Quick Connect coupling for easy disconnection from water source to allow for draining—also compatible with 3/4" or 1-1/4" pipe thread Cam-Lever Quick Connect couplings
- Choose non-kinking, lightweight, flexible woven outer hose for those uses where compact storage is needed, or non-kinking, flexible Polylastic outer hose for semi-permanent installations
- Not affected by power outages
- Safe-eliminates fire risk and potential damage caused by electrical overheating or failure

Available in lengths of 25', 50', 75' and 100' or custom orders

Offers long life and low-maintenance for up to 20 years with a 10-year warranty!

Ideal for gardens, farms, cottages, unheated buildings, temporary worksites, industrial applications, and more...
